PPI use <sup>a</sup>	Caucasian	256067 (32)	217048 (27)	1.26 (1.26, 1.27)	<b>A</b>	
PPI use	Non-Caucasian	71556 (30)	68230 (29)	1.07 (1.06, 1.08)	: •	
<sup>a</sup> PPI includes pantopra	azole, omeprazole, es	omeprazole, lans	oprazole and ra	abeprazole	1.0 1.5	2.0

Study found a strong link between obesity and a higher prevalence of GERD, erosive esophagitis, BE, and esophageal cancer.

The correlation was particularly strong in women and Caucasian individuals.

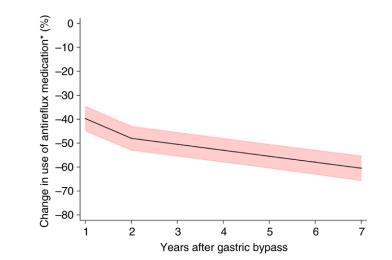

The relationship between obesity and esophageal cancer was even stronger in men, warranting further investigation

In conclusion, this large and populationbased cohort study with long and complete follow-up indicates that gastric bypass is an effective and long-lasting treatment of GERD in only approximately 50% of patients with severe obesity.

This is a lower success rate than in previous studies, indicating that the treatment effect may have been overstated.

### Roux-en-Y gastric bypass versus fundoplication for gastroesophageal reflux disease in patients with obesity results in comparable outcomes

Stephanie Joseph <sup>1</sup>, Vanessa N Vandruff <sup>2</sup>, Julia R Amundson <sup>2</sup>, Simon Che <sup>3</sup>, Christopher Zimmermann <sup>3</sup>, Shun Ishii <sup>3</sup>, Kristine Kuchta <sup>3</sup>, Woody Denham <sup>3</sup>, John Linn <sup>3</sup>, H Mason Hedberg <sup>3</sup>, Michael B Ujiki <sup>3</sup>

Total no of patient = 95 Fundoplication (n = 72, 75.8%) Roux-en-Y gastric bypass (n = 23, 24.2%)

All patients saw an improvement in gastroesophageal reflux disease symptoms and overall quality of life.

There were no significant differences in postoperative Reflux Symptom Index, Dysphagia, or Short-Form-36 scores. Significant differences in gastroesophageal reflux disease-Health Related Quality of Life scores were seen at preoperative, 1, 2, and 5 years postoperative (P < .05), with better symptom control in the fundoplication group.

Fundoplication ••••• RYGB

> Surgery. 2024 Mar;175(3):587-591. doi: 10.1016/j.surg.2023.10.031. Epub 2023 Dec 27.

## Roux-en-Y gastric bypass versus fundoplication for gastroesophageal reflux disease in patients with obesity results in comparable outcomes

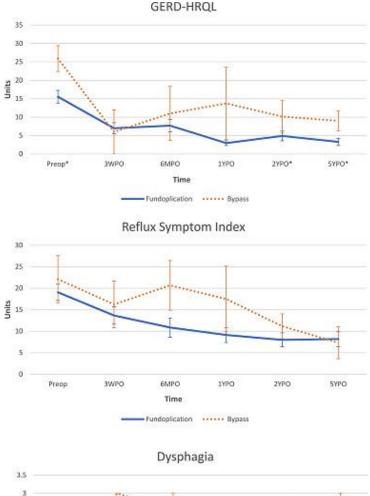

Stephanie Joseph <sup>1</sup>, Vanessa N Vandruff <sup>2</sup>, Julia R Amundson <sup>2</sup>, Simon Che <sup>3</sup>, Christopher Zimmermann <sup>3</sup>, Shun Ishii <sup>3</sup>, Kristine Kuchta <sup>3</sup>, Woody Denham <sup>3</sup>, John Linn <sup>3</sup>, H Mason Hedberg <sup>3</sup>, Michael B Ujiki <sup>3</sup>

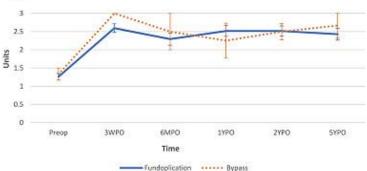

No significant difference was noted in postoperative DeMeester scores or percent time pH <4.

Weight loss was significantly higher in the Roux-en-Y gastric bypass group at all postoperative time points up to 5 years (P < .05).

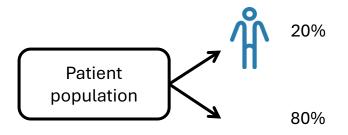

#### **Conclusion:**

Roux-en-Y gastric bypass and fundoplication both decrease gastroesophageal reflux disease symptoms. Subjective data shows that patients undergoing Roux-en-Y gastric bypass may complain of worse symptoms compared to patients undergoing fundoplication. Objective data notes no significant difference in postoperative pH testing.
