

Gastric Sleeve with Reduced Port in Medical Tourism

Dr. Eduardo Cardenas Meave

CIRUJANO BARIATRA

INTRODUCTION

Bariatric surgery has become the most effective treatment for obesity and type 2 diabetes mellitus.

The most common bariatric procedure is the Gastric Sleeve and to perform it different techniques can be adopted from Laparoscopic to Robot-assisted Surgery.

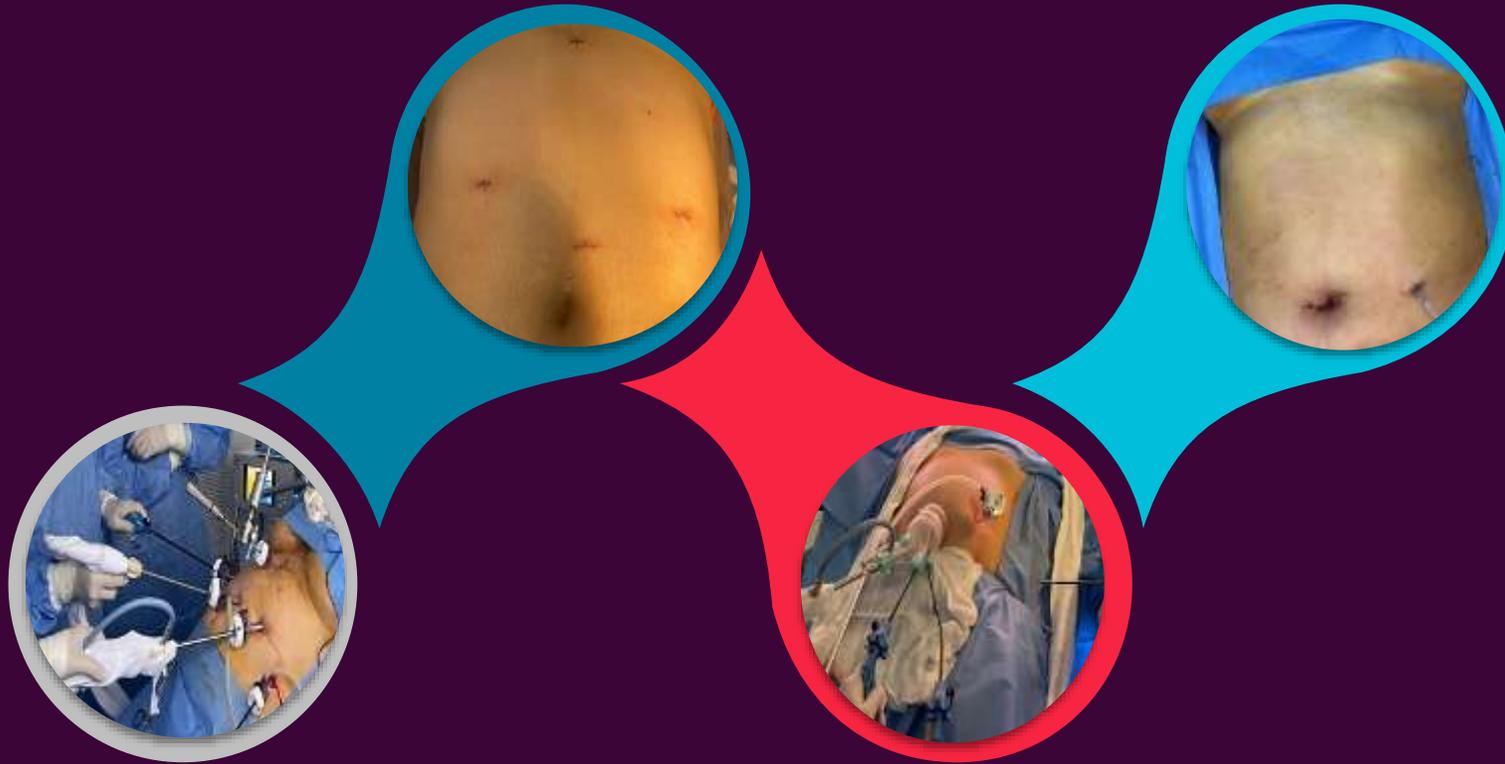

The realization of the Gastric Sleeve through a previous scar (navel) has shown interest in the surgical community since the incision is almost hidden.

INTRODUCTION

Laparoscopic Reduced Port Surgery (RPLS) refers to the decrease in the number of ports or the size of ports or a combination of the two.

It has the potential to reduce post-operative pain and improve aesthetic appearance without compromising the outcome.

OBJECTIVE

It is to describe our experience with Gastric Sleeve Surgery with reduced ports (1 transumbilical multiport trocar + 1 accessory port).

CRITERIOS DE INCLUSIÓN

Se escogieron todos los pacientes sometidos a manga gástrica con abordaje transumbilical (trocar multipuerto CiMedical) con 1 sólo puerto accesorio y que cumplieran con los siguientes criterios:

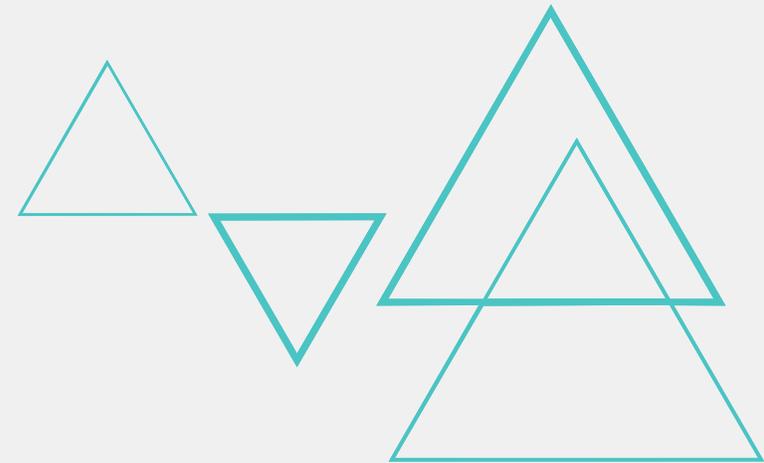

%

Edad entre 18 y
65 años

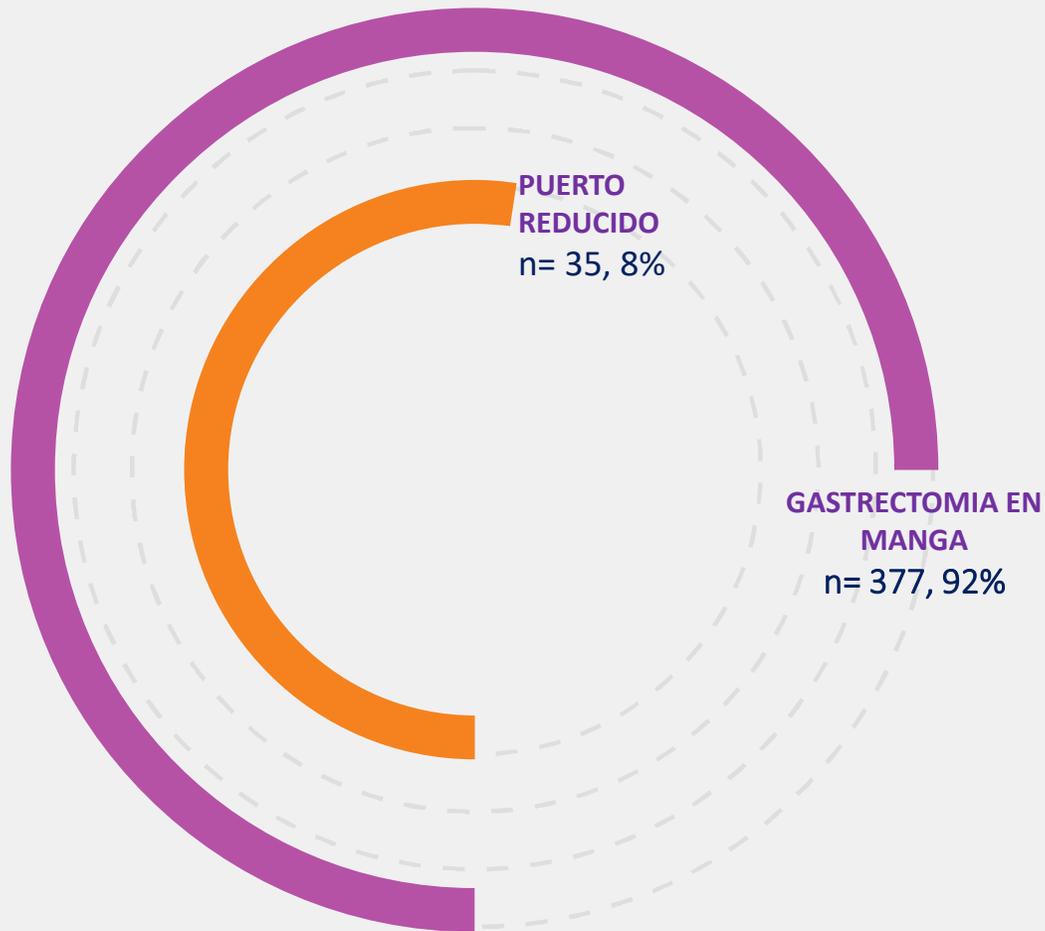

%

IMC 30 a 38
kg/m²

RESULTS

Gastrectomía en Manga

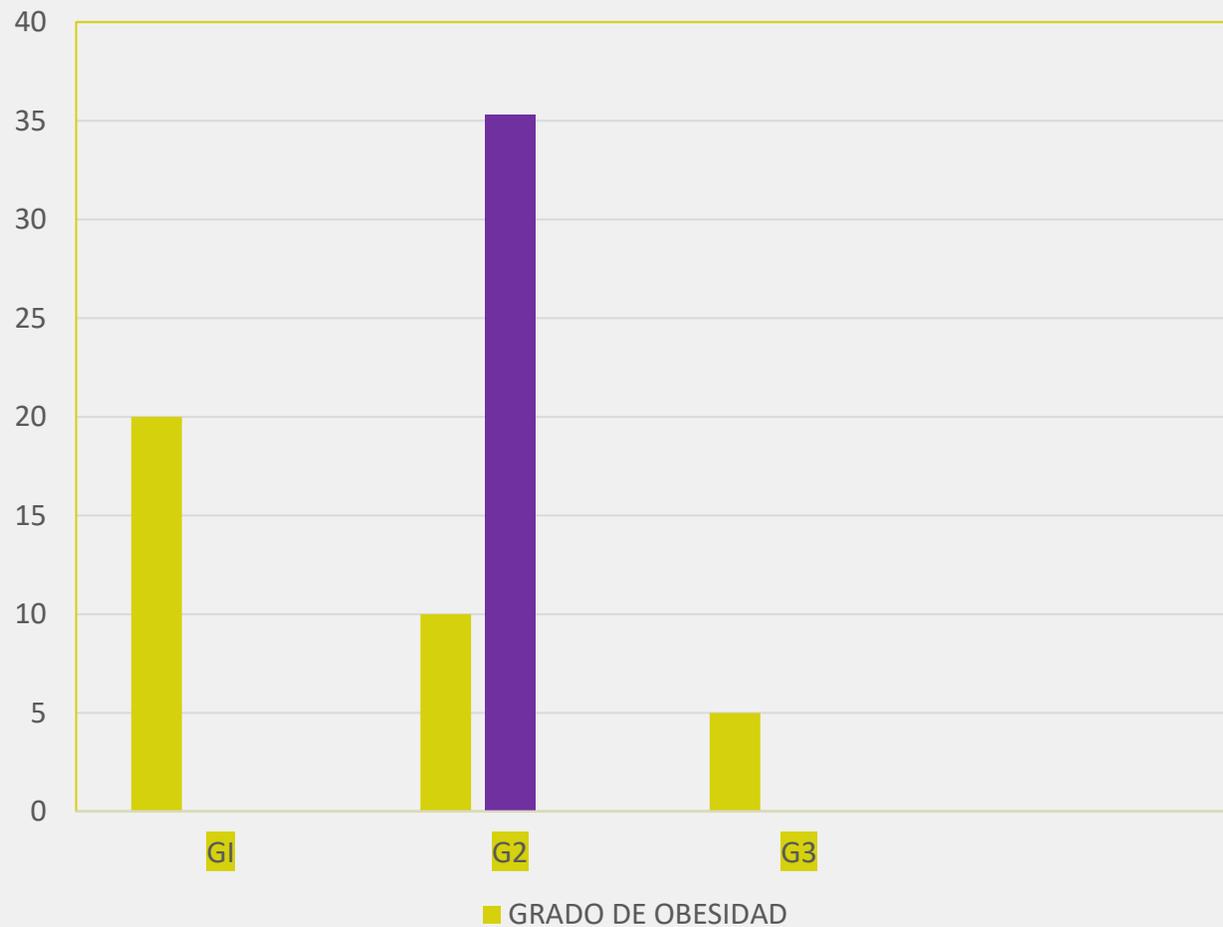

- Transumbilical + 1 puerto accesorio
- GENDER
- AGE
- INICIAL WEIGHT
- HEIGHT

377 Pacientes

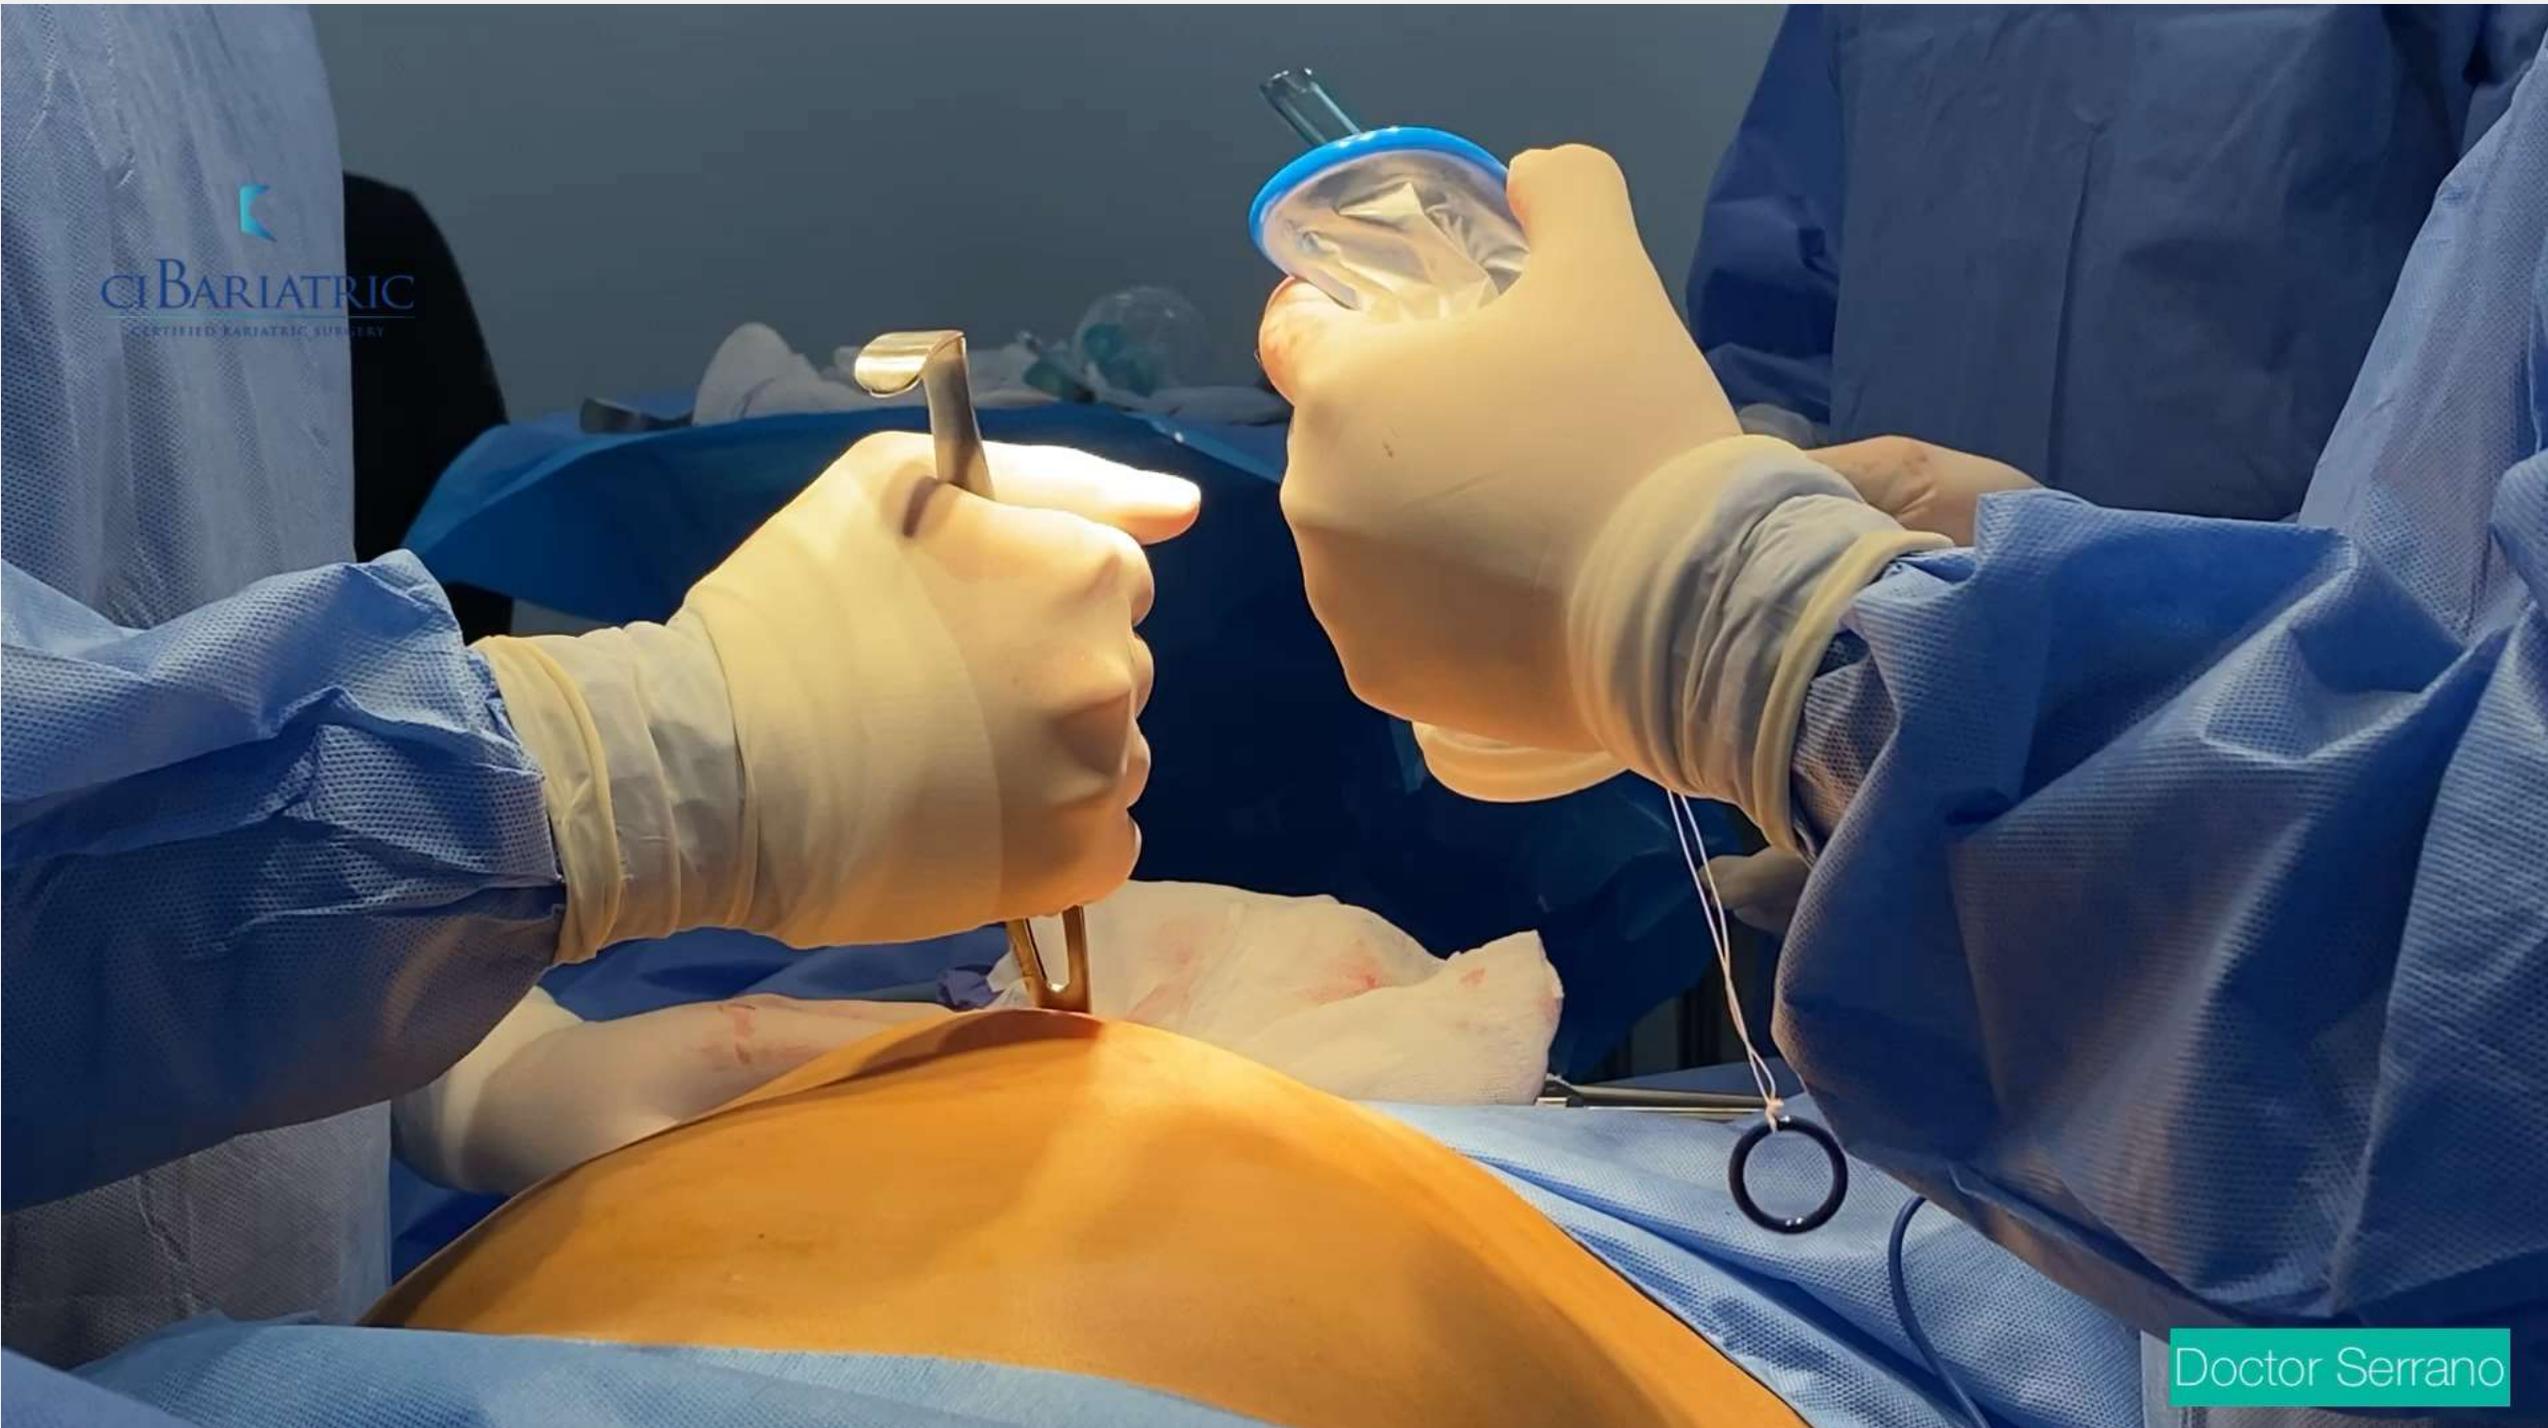

- 35 Pacientes
- M 3 (8.6%)
F 32 (91.4%)
- 35.9 (19 – 52)
- 94.5 ± 10.9
- 1.63 ± 0.07

RESULTS

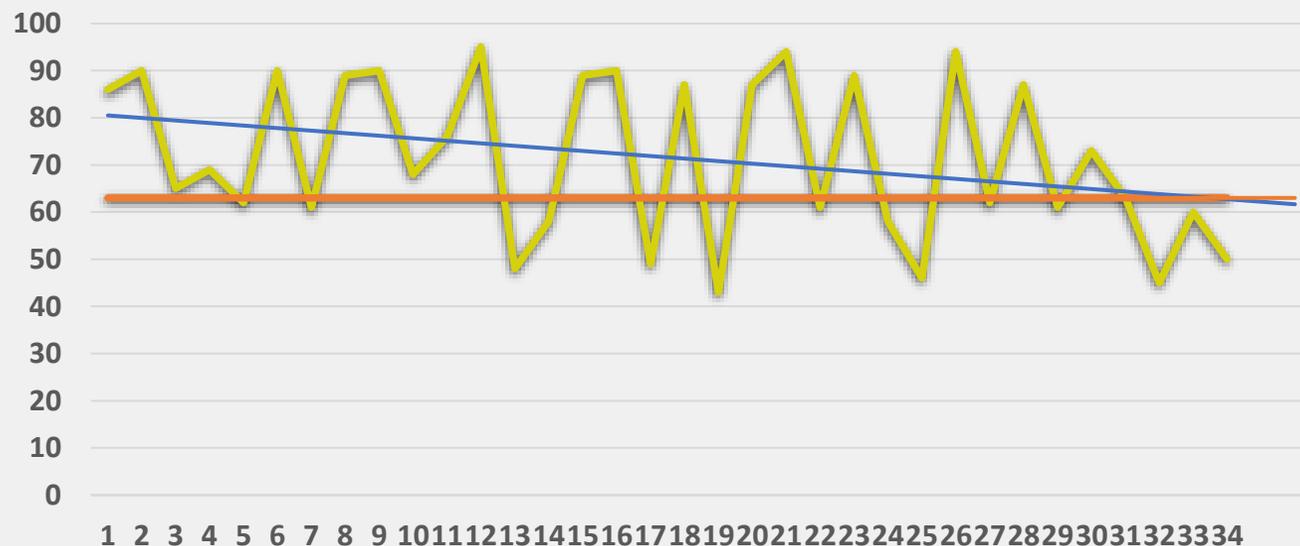

IMC	35.3 ± 4.0
%EW	57.4 ± 18.14
OBESIDAD	
GRADO 1	20 (57%)
GRADO 2	10
GRADO 3	5
DM2	3(8.6%)
HAS	22(62%)
DISLIPIDEMIA	4 (11.4%)
OTRAS	10

RESULTS

OR TIME

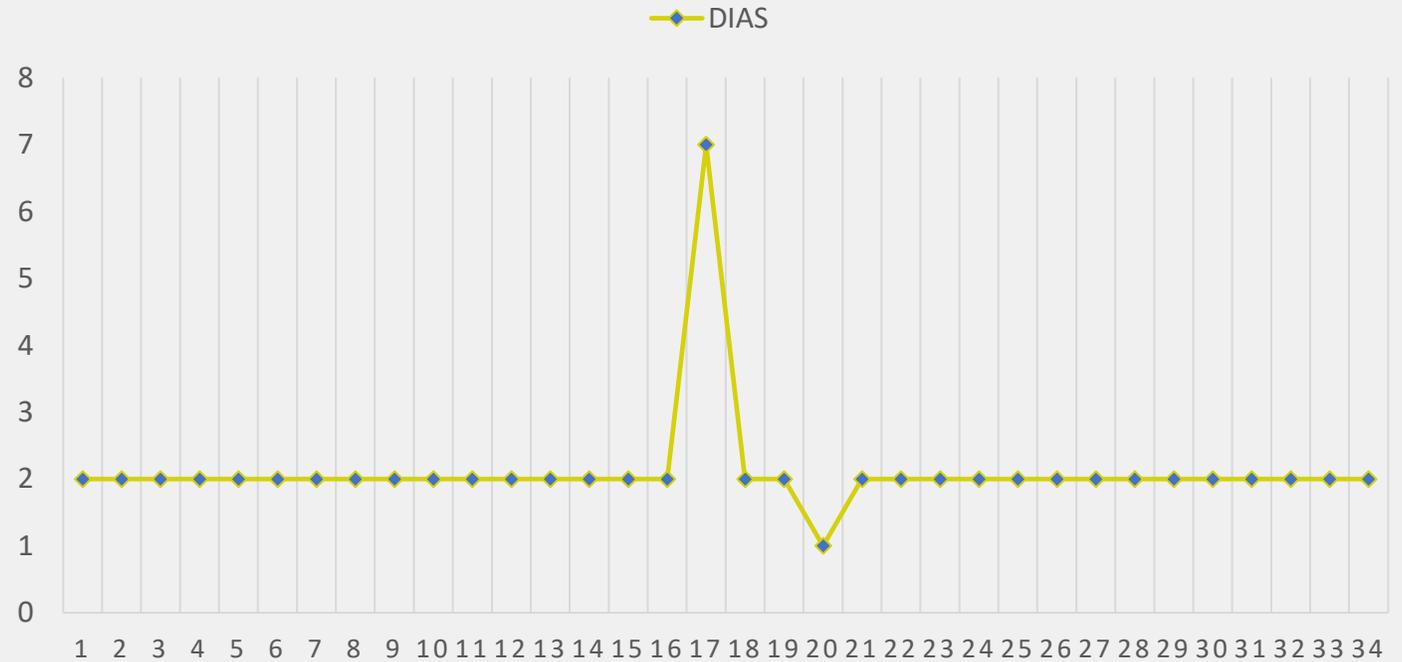

AV = 63.4 minutos

— Tiempo — Linear (Promedio)

SURGERY TIME	63.4 ± 11.3
OR COMPLICATIONS	0
SUTURE	9 (25%)
Tri staple	35 (100%)
ADITIONAL TROCARS	0

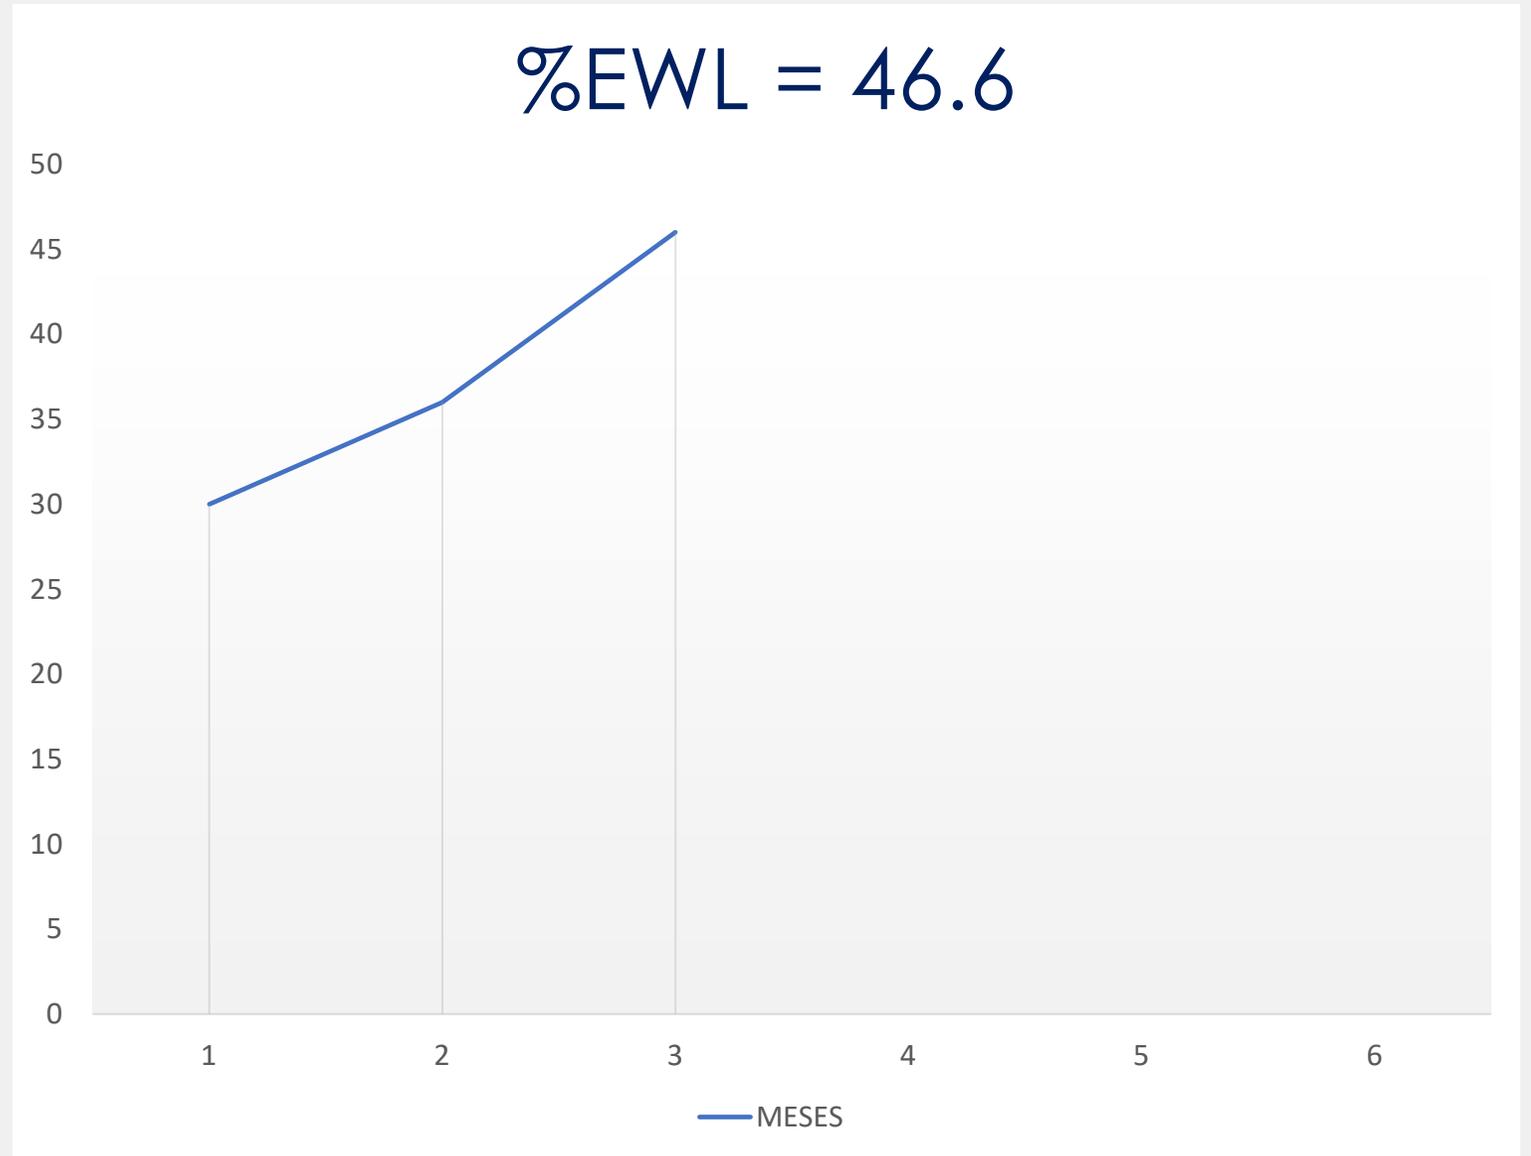

RESULTS

DÍAS DE EIH

Días de estancia IH	2.03±0.86
POST OPERATIVE COMPLICATIONS	1

RESULTS

DISCUSIÓN

Los datos en la literatura son escasos, pero la información que existe demuestra que la pérdida de peso post-operatoria , las complicaciones intraoperatorias o post-operatorias así como el grado de seguridad de la cirugía es similar a una cirugía de manga gástrica laparoscópica multipuerto convencional..

CONCLUSION

- Reduced port surgery (Transumbilical + 1 accessory port) is recommended in patients preferably with low BMI.
- Better aesthetic appearance
- Although the surgical time is longer, the rate of intraoperative and postoperative complications, as well as the results in the loss of % of excess weight, are very similar to the conventional laparoscopic approach.
